

# ELECTRIC MOTORS

## 2SIE IE2

[www.bevi.com](http://www.bevi.com)

# TECHNICAL INFORMATION TYPE 2SIE IE2

## Construction

2SIE have a stator house in aluminum from frame 80-112. End shields are in aluminum in frame 80-100 and in cast iron from frame 112. Flanges are in cast iron from frame 90. From frame 132 and up is the stator house in cast iron and also the end shields. Normally have foot motors in 2-4-6 pole execution roller bearing on drive side while 2 pole, flange- and foot/flange motors have ball bearings as standard. The motors are produced according to IEC60034-30: 2008, IEC60034-2-1:2007 and IEC 60034-30-1:2014. Standard are SS-EN 60 034-1 IEC 60072 and motors are marked with CE.

## Voltage and Frequency

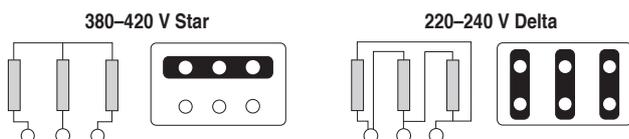

Motors are available for frequencies of 50Hz and 60Hz at standard voltage. Special voltage on request. The voltage can vary up to +/- 5%, without derating.

## Maintenance

In normal use maintenance is limited to greasing of the bearings. All motors in sizes 200 and larger are fitted with grease nipples as standard. The bearings are lubricated with lithium based grease class 1. Smaller motors have closed bearing housings and sealed bearings, and can be considered maintenance free. For hard operations special bearings can be supplied – for example, for high ambient temperature and increased speed.

## Voltage

Three phase single speed motors can normally be connected for two different voltage ranges (connection in star – higher voltage, or delta – lower voltage) with a ratio of  $\sqrt{3}$ . This gives a wide application range and simplified management of ordering and stockholding.

The above connection diagrams are applicable to range wound motors for supplies of 220-240 V (Delta connection) and 380-420 V (Star connection).

Examples:

a) 220-240 V Delta/380-420 V Star – may be labelled 230/400 V (Standard for motors 3 kW and smaller). Suitable for direct on line starting on 380-420 V supplies.

b) 380-420V Delta/660-720V Star – may be labelled 400 V Delta (Standard for motors 4 kW and larger). Suitable for Star/Delta starting on 380-420 volt supplies or direct on line starting on 660-720 V supplies.

## Frequency

Motors wound for 50Hz supplies can also be used on 60Hz. Rated data can be calculated from the table below.

Voltage at 50Hz	Voltage at 60Hz	60Hz data as % of 50Hz data			
		Power P	Torque M	Starting torque Mst	Speed n
230	230	100	83	69	120
230	255	111	92	85	120
400	400	100	83	69	120
400	440	110	92	84	120
400	460	115	96	92	120
400	480	120	100	100	120
525	525	100	83	69	120
525	575	115	96	92	120

## Enclosure (degree of protection)

Motors are produced in degree of protection IP55 as standard, but are also available to other standards.

## Insulation Class

All motors are wound with Class F material, but calculated with temperature rise according to class B at 50Hz.

## Balancing

Motors are balanced with a half key. Special degrees of balancing are available on request.

## Standards

Motor construction, outputs, and fixing dimensions comply with IEC standards.

STANDARD	STANDARD EFFICIENCY
SS-EN 60 034-1 IEC 60072	IEC 60034-30: 2008 IEC 60034-2-1: 2007 IEC 60034-30-1: 2014

## Thermistors

Protection is provided fitted in frame 160 and up. Thermistors are temperature sensitive resistors that at a certain temperature have a wide change of resistance. When connected with sensing relay it can be used to e.g. cut of the supply to main contactor coil.

## Cooling

As standard, the fan and cowl is fitted at the non-drive end (cooling form IC 411). Other cooling methods can be supplied e.g. separately driven cooling fan (often used with inverter drives).

## Heaters

Motors used in conditions of wide temperature variation or extreme climatic conditions can be damaged by condensation and dampness in the windings. In motors fitted with heaters, the windings are heated to a few degrees above ambient, which is enough to prevent condensation. Heaters must not be energised when the motor is running. Smaller motors can be heated by supplying a low voltage via the motor leads, using a supply of 5-10% of the rated voltage between two phases. BEVI can fit heaters to all motor sizes.

## Ambient Temperature

The motors can operate at ambient 40 degrees and for Marine applications at 45 degrees if the motor not are placed over 1000 meter over the sea.

## Duty

Motors are designed for S1 duty. The motors can also be used for S2-S9 duty.

## Vibration Speed

The vibration speed complies with Class A of IEC60034-14 as standard. Class B can also be met if required by customer.

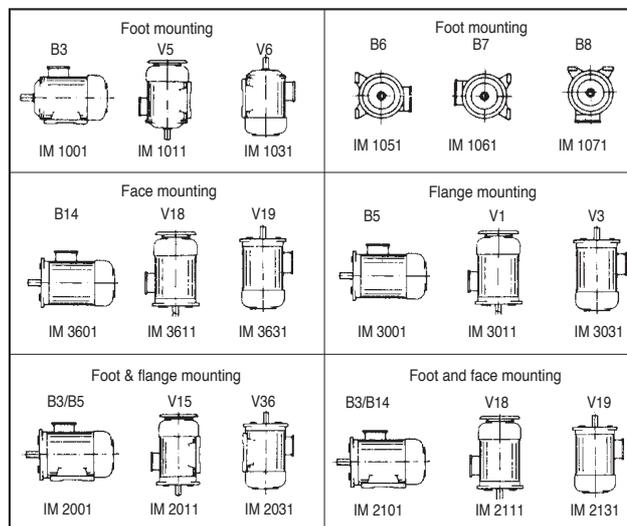

## Noise Level

The noise level complies with IEC60034-9 as standard.

## Recycling

Larger motors can advantageously be renovated. The motors will otherwise be treated as electronic waste in accordance with national laws and regulations. The motors can be recycled at very high extent.

## Mounting arrangements

# ELECTRIC MOTORS

## 3SIE IE3

[www.bevi.com](http://www.bevi.com)

# TECHNICAL INFORMATION TYPE 3SIE IE3

## Construction

3SIE have a stator house in aluminum from frame 80-112. End shields are in aluminum in frame 80-100 and in cast iron from frame 112. Flanges are in cast iron from frame 90. From frame 132 and up is the stator house in cast iron and also the end shields. Normally have foot motors in 2-4-6 pole execution roller bearing on drive side while 2 pole, flange- and foot/flange motors have ball bearings as standard. The motors are produced according to IEC60034-30: 2008, IEC60034-2-1:2007 and IEC 60034-30-1:2014. Standard are SS-EN 60 034-1 IEC 60072 and motors are marked with CE.

## Voltage and Frequency

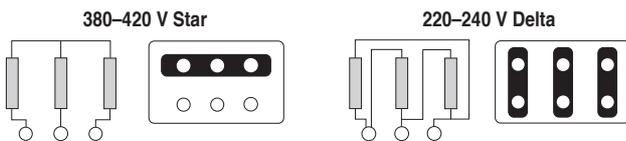

Motors are available for frequencies of 50Hz and 60Hz at standard voltage. Special voltage on request. The voltage can vary up to +/- 5%, without derating.

## Maintenance

In normal use maintenance is limited to greasing of the bearings. All motors in sizes 200 and larger are fitted with grease nipples as standard. The bearings are lubricated with lithium based grease class 1. Smaller motors have closed bearing housings and sealed bearings, and can be considered maintenance free. For hard operations special bearings can be supplied – for example, for high ambient temperature and increased speed.

## Voltage

Three phase single speed motors can normally be connected for two different voltage ranges (connection in star – higher voltage, or delta – lower voltage) with a ratio of  $\sqrt{3}$ . This gives a wide application range and simplified management of ordering and stockholding.

The above connection diagrams are applicable to range wound motors for supplies of 220-240 V (Delta connection) and 380-420 V (Star connection).

Examples:

a) 220-240 V Delta/380-420 V Star – may be labelled 230/400 V (Standard for motors 3 kW and smaller). Suitable for direct on line starting on 380-420 V supplies.

b) 380-420V Delta/660-720V Star – may be labelled 400 V Delta (Standard for motors 4 kW and larger). Suitable for Star/Delta starting on 380-420 volt supplies or direct on line starting on 660-720 V supplies.

## Frequency

Motors wound for 50Hz supplies can also be used on 60Hz. Rated data can be calculated from the table below.

Voltage at 50Hz	Voltage at 60Hz	60Hz data as % of 50Hz data			
		Power P	Torque M	Starting torque Mst	Speed n
230	230	100	83	69	120
230	255	111	92	85	120
400	400	100	83	69	120
400	440	110	92	84	120
400	460	115	96	92	120
400	480	120	100	100	120
525	525	100	83	69	120
525	575	115	96	92	120

## Enclosure (degree of protection)

Motors are produced in degree of protection IP55 as standard, but are also available to other standards.

## Insulation Class

All motors are wound with Class F material, but calculated with temperature rise according to class B at 50Hz.

## Balancing

Motors are balanced with a half key. Special degrees of balancing are available on request.

## Standards

Motor construction, outputs, and fixing dimensions comply with IEC standards.

STANDARD	STANDARD EFFICIENCY
SS-EN 60 034-1 IEC 60072	IEC 60034-30: 2008 IEC 60034-2-1: 2007 IEC 60034-30-1: 2014

## Thermistors

Protection is provided fitted in frame 160 and up. Thermistors are temperature sensitive resistors that at a certain temperature have a wide change of resistance. When connected with sensing relay it can be used to e.g. cut of the supply to main contactor coil.

## Cooling

As standard, the fan and cowl is fitted at the non-drive end (cooling form IC 411). Other cooling methods can be supplied e.g. separately driven cooling fan (often used with inverter drives).

## Heaters

Motors used in conditions of wide temperature variation or extreme climatic conditions can be damaged by condensation and dampness in the windings. In motors fitted with heaters, the windings are heated to a few degrees above ambient, which is enough to prevent condensation. Heaters must not be energised when the motor is running. Smaller motors can be heated by supplying a low voltage via the motor leads, using a supply of 5-10% of the rated voltage between two phases. BEVI can fit heaters to all motor sizes.

## Ambient Temperature

The motors can operate at ambient 40 degrees and for Marine applications at 45 degrees if the motor not are placed over 1000 meter over the sea.

## Duty

Motors are designed for S1 duty. The motors can also be used for S2-S9 duty.

## Vibration Speed

The vibration speed complies with Class A of IEC60034-14 as standard. Class B can also be met if required by customer.

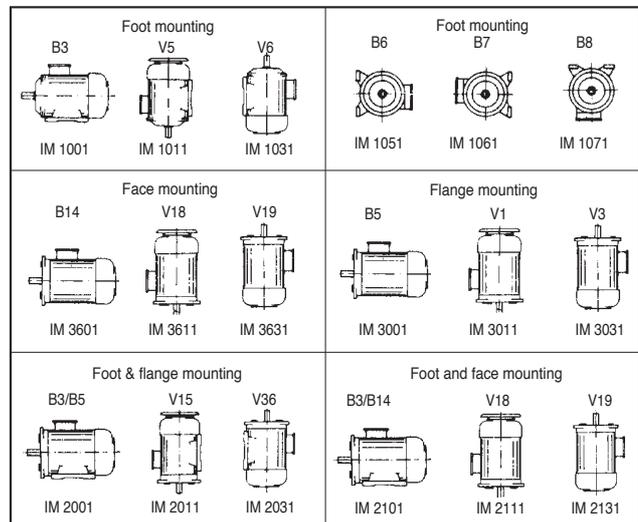

## Noise Level

The noise level complies with IEC60034-9 as standard.

## Recycling

Larger motors can advantageously be renovated. The motors will otherwise be treated as electronic waste in accordance with national laws and regulations. The motors can be recycled at very high extent.

## Mounting arrangements
