## TURCK Pressure Controls Offer a Flexible Solution to Any Pressure Application

### Designed with Features to Meet your Needs

The complete line of **TURCK** pressure controls present a wide range of pressure-sensing products that have been designed for versatility and efficiency in a variety of pressure monitoring applications. Our electronic pressure controls are well suited for use in pneumatic and hydraulic systems where there is a need to monitor, measure or control the pressure of both liquids and gases. If your application requires pressure monitoring, **TURCK** pressure controls are the right choice for you.

### Solid State Reliability

**TURCK** pressure controls have no mechanical or moving parts that will wear out over time. The piezo-resistive measuring cells offer an extremely high overpressure resistance, which in turn produces a pressure control that is remarkably stable. The robust housings and ceramic piezo-resistive measuring cells combined with solid-state reliability give these controls a 10 million-cycle rating. The high shock and vibration resistance allow these devices to function safely and reliably even in the harshest of environmental conditions.

### Pressure Controls from **TURCK** for Multiple Applications

**TURCK** pressure controls can be used in a wide variety of applications with either liquids or gases. Whether it's control in hydraulic systems or monitoring of pressure in welding guns, **TURCK** pressure controls are designed to provide reliable data in your harshest application.

Some common applications include:

- Air Compressors
- Hydraulic Clamping Systems
- Bad Filter Detection
- Vacuum for Pick-up and Transfer of Product
- Pneumatic Systems
- Hydraulic Accumulators
- Injection Molding Machines
- Press Machines
- Automotive Welding Pressure
- Machine Coolant
- Pump Run Dry

Implementing process control into your system should not require a redesign of your process. Why not choose a sensor that can be modified to meet your unique specifications? Robust, solid state, and available in several programmable styles - the **TURCK** Pressure Controls have the flexibility to adapt and perform in every application.

## Fully Programmable Pressure Sensors

All TURCK programmable pressure sensors are completely programmable via push buttons on the front face of the sensor. The PC... sensors are easy to set up and can be programmed at any time with no in-line pressure required. This means all parameters can be programmed prior to installation to reduce downtime. Some of the programming features available include:

- Easy Push Button Setup
- Units of Measure in Either psi or bar
- Normally Open or Normally Closed Outputs
- NPN or PNP Outputs
- Time Delays for Set points and Reset Points
- Peak Pressure Memory Function
- Three Different Display Options
- Adjustable Analog

These sensors are available in either AC or DC, with analog outputs, switching outputs, or both. The analog output versions feature an adjustable upper value allowing the sensors to be tailored to specific application needs. The outputs can be used in the standard hysteresis mode for over/under pressure monitoring or as a window. The dual output version offers two set points that can be programmed completely independent of one another. This means the outputs can be set up for normally open or normally closed, standard hysteresis or window function, NPN or PNP, or any combination thereof. A variety of pressure ranges are available, including a vacuum rating of -14.5 psi (-1 bar) and a high end rating of 8700 psi (600 bar).

## Tough Industrial Pressure Transmitters

**TURCK's** industrial pressure transmitters combine the reliability of solid-state design with the durability of Stainless Steel. The result is a pressure transmitter that provides accurate and dependable pressure measurement in demanding applications. At the heart of the transmitter is a proven ceramic component technology that provides long-term stability and a high tolerance to overpressure conditions. A patented media stop, included with devices rated over 40 bars, contains the process media in the event that the burst pressure is exceeded. The housing is constructed of Stainless Steel and provides an IP 67 level of protection. The fluid connection is a standard G 1/4 or 1/4 NPT thread that works with all of **TURCK's** existing pressure accessories. All of the transmitters include an M12x1 **eurofast®** quick disconnect, making them compatible with **TURCK's** extensive line of cordsets and junction boxes.

## TURCK Pressure Sensors and Transmitters with Diaphragms Installed

### Operation

In many pressure applications, there is a need to separate the pressure sensor from the media it is sensing via an isolation device. **TURCK** offers a variety of diaphragm seals that are attached either directly or remotely to the pressure device to provide this isolation. The diaphragms that **TURCK** offers are all manufactured and installed by PI Components, and are not available as a separate item. This insures that the quality of the assembly is maintained for optimum accuracy.

The **TURCK** pressure sensor is attached into the top of the diaphragm housing, which is then filled with fluid. The sensor receives the pressure hydraulically via this internal medium. The lower half of the diaphragm housing adapts to the process connection, and is designed to contain the process medium as it acts against the thin membrane located between the two housings.

### Applications

**TURCK** offers the diaphragms in numerous wetted material options, as well as with many different fill fluids to solve any application. Typical process applications that require the use of a diaphragm include:

- Sanitary Applications
- Corrosive Processes
- Viscous Applications
- Applications where Freezing Media can Clog the Sensor

## Innovative Pressure Sensor and Diaphragm Solutions

**TURCK** is the market leader in providing innovative sensor solutions for industrial automation applications. **TURCK's** high quality, high performance pressure sensors and pressure transmitters can be combined with multiple styles of diaphragms to give our customers an infinite selection of unique pressure sensing solutions.

**TURCK** offers diaphragms in numerous wetted material options, as well as with many different fill fluids. This broad selection provides custom sensing solutions for the most diverse pressure applications. Parts numbers should be developed through your **TURCK** representative or application support. In general, the formula below illustrates how to configure a custom sensor and diaphragm assembly.
